

IN'FLECTOR[®]
Insulating Panels
The All Season Solar Controller

A Little Thing About Windows

Did you know that a single pane of window has an insulating value of R1 ? Did you also know that hot air masses are constantly seeking colder air masses for exchange ? (called convection) ***So what !*** The “what” is that every interior living space loses 67% of their hot or cold air mass right out their poorly insulated windows everyday.

Many people invest thousands of dollars to create high efficiency air coolers or heaters to only send that air mass out the window as well. Replacing glass with newer glass windows can only minimally reduce this air mass exchange. ***Help !***

Placing IN'FLECTOR products in front of your windows adds an insulating R value of 10 (almost equivalent to your walls) and virtually stops all air exchanges through the window. ***How ?***

IN'FLECTOR keeps 78% of the radiant heat out in the summer, and reverses in the winter to produce huge amounts of solar radiant heat for the winter. You could easily save up to 40% of your energy costs year round with IN'FLECTOR.

IN'FLECTOR's added bonus saves you thousands of dollars every year by eliminating the need to replace sun faded floors and rugs, or sun damaged windows coverings, tanned or faded furniture, or any other products close to your windows by blocking 92% of those nasty UV rays.

And YES you can clearly see through IN'FLECTOR as the product only reduces natural light by 10% with the amazing ability to reduce sun glare on electronic products. (big screen TV's, Computer Monitors, etc.)

IN'FLECTOR is clearly the choice to ***stop all your window problems*** and create a more stable interior room environment for increased creature comfort !
